Recommendations:

- Poor compliance with PCI DSS standards leave the organisation open to regulator fines and lawsuits stemming from a potential future breach of customer credit card information. Recommend implementing principle of least privilege as well as encryption and secure password management to ensure compliance with PCI DSS. This is of **high priority**.
- Lack of disaster recovery plan and data backups poses a high risk to the organisation in the event of a cyber attack or data loss. Recommend development of a disaster recovery plan and offsite backups of critical data to ensure business continuity. This is of **high priority**.
- Irregular maintenance of legacy systems leaves the organisation open to security threats from unpatched security vulnerabilities. Recommend implementation of regular schedule for patching of legacy systems to minimise cyber attack surface area. This is of **medium priority**.
